Loop Statements

Loops are used to do something repeatedly. For instance lets say we get a list of 50 blog posts from the database and we want to print their titles on our page. Instead of writing the code 50 times, we would instead use a loop to make this happen.

For loop

```
for (initial-expression; condition; second-expression){
  // run this code in block
}
```

Step 1: Run the initial expression.

Step 2: Check if condition meets. If condition meets, proceed; or else end the loop.

Step 3: Run the code in block.

Step 4: Run the second-expression.

Step 5: Go to Step 2.

While loop

```
while (i<3){
  // run this code in block
  i++;
}</pre>
```

Step 1: If the condition is true, proceed; or else end the loop.

- Step 2: Run the code in block.

Step 3: Go to Step 1.

Do while loop

```
do {
  // run this code in block
  i++;
} while (i<3);</pre>
```

Step 1: Run the code in block.

Step 2: If the condition is true, proceed; or else end the loop.

Step 3: Go to Step 1.
