Auto Inherited Properties

When you create a value in JavaScript, certain properties are automatically inherited by this value. This magic happens because every type has a constructor with a special property called prototype. All methods on the prototype gets automatically inherited by the new value created for that type. Take a look at some of of these methods on the right.

	const	thing	=	"some	text
S	tring				
G	oogle 'Mo	zilla Stri	ng'	to find ti	he docs
	concat()			
	charAt()			
	index0f	()			
	startsW	/ith()			
	endsWit	h()			
	split()				
	slice()				

```
Array
  const num = 123.45;
                                       Google 'Mozilla Array' to find the docs
                                       .filter()
Number
                                       .map()
Google 'Mozilla Number' to find the docs
                                       .find()
.toFixed()
                                       .every()
.toPrecision()
                                       .some()
.toString()
                                       .sort()
                                       .slice()
Boolean
                                       .splice()
Google 'Mozilla Boolean' to find the docs
                                       .reduce()
                                       .forEach()
.toString()
```

Built-in Objects

JavaScript gives us a ton of useful built-in objects to make our lives easier. The Date and Math objects are very useful on a regular basis. Take a look at some of their features on the right. Full list of builtin objects in JavaScript visit https://developer.mozilla.org/en-US/docs/Web/JavaScript/Reference/Global_Objects

Math

Math.random()

Math.pow(2, 3) // 8
Math.sqrt(16) // 4
Math.min(7, 8, 6) // 6
Math.max(7, 8, 6) // 8
Math.floor(123.45) // 123
Math.ceil(123.45) // 124
Math.round(123.45) // 123

Date

Google 'Mozilla Date' to find the docs
const d = new Date('9/17/1988');
d.getDay()
d.getFullYear()
d.getMonth()

Date.now()
Milliseconds since Jan 1, 1970

// 0.45..
